The Good Jobs for Michigan Program has done exactly what it was supposed to - attract and grow good jobs and large-scale projects to the state. To date, the Great Lakes State has been able to lure four major projects into our communities, helping us beat out key competitors like Silicon Valley, Dallas, Toronto and fellow Midwest states like Ohio and Indiana. We must ensure that Michigan retains this critical economic development tool. Simple, transparent, performance-based, and predictable, advancing a stronger state.
